

# OSPREY FLY BOX

## ANTRON EGG

*contributed by*

**Martin Swain**

I first came across this easy to tie pattern on the MidCurrent Fly Fishing web site. I thought it looked really cool, so I gave it a try.

The first time I used this fly was up on the Squamish when I was targeting rainbows. I caught a couple of rainbows early and then nothing .... so I moved.

After I moved to a slower pocket of water, in the span of two hours hooked and landed ten bull trout.

This fly looks odd but when it's in the water it really comes alive.

You can tie this with Egg yarn if you don't have antron.

### MATERIALS

- Hook:** Scud Hook Size #10 - #12
- Thread:** 70 Denier White
- Egg:** Antron - Light orange/gold
- Yolk:** Antron - Red

### TYING INSTRUCTIONS

- Tie in the thread a 1/2 hook eye back.
- Take a small clump of antron on top of the hook tie down.
- Repeat the antron three more times on the bottom and on both sides of the hook.

- Take a small clump of red antron dub on to the thread and form a small ball.
- Then spiral the thread barber pole style down the hook around the bend.

- Lightly pull all four clumps of antron back to the thread at the bend of the hook and tie them down.
- Clip excess Antron.

- Grab the thread and tied down antron and slide them back up the hook towards the red yoke. This should form a ball shape with the red yoke barely visible through the antron.
- Whip finish cut the thread and use head cement on the thread wraps. The white thread will take on the colour of the egg antron.
